To Whom It May Concern

Smeeta Antony was seen for involuntary orgasms and excessive vaginal lubrication. She is currently in the process of getting an Interstim trial for neuromodulation for her sacral nerves to assess the effect on her symptoms. Her estrogen level is low following her total hysterectomy and bilateral salpingo-oophorectomy from another provider. She was referred to me to consider "estrogen inhibition" however it is my recommendation that this is not the etiology of her symptoms. We have checked her FSH/estradiol and she is well in the post-menopausal range. Besides this, there is little peripheral conversion into estrogen due to her BMI. I am referring her for Neurological assessment and consultation.

Sincerely
